University of Wisconsin-Madison (Frederick R. Blattner, director). Project and NCHGR) The entire sequence was independently frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, have been correlated with genetic loci are being annotated with CG Stock Center (CGSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible ongoing task whose goal is to make the genome sequence more useful appreciated. Updated information will be available at the E. coli (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and sequence changes. Annotation updates: updated gene lead the sequence changes. Annotation updates: updated gene identifications are periodically updated; this is version M54. No and products; all new functional assignments courtesy of Monica sequences described in reference 1. The unique numeric identifiers RNA.encoding) are now designated as gene synonyms instead of names.

XX 
The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escheribhia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2000-672631/65.

CC homologous species; (3) directing recombination of a recombinant gene CC back into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal, CC protein containing an amino acid polymer comprising a recombinant AgfA CC protein containing a replacement segment or segments of foreign amino CC acid segment or sequences grown on a Salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (1) is CC useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC immunogenicity and adhesion properties relevant for an efficient live cagainst the inserted epitope, and hybrid fimbria are usually strong CC immunogens, which may be important for directing an immune response consensive to purify in large amount. The present sequence is given in XX to the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 456 BP; 121 A; 112 C; 118 G; 105 T; 0 U; 0 Other;

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from truelly all other microbial organisms. X
back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid gequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the Nathernation and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live
                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of finbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                05-APR-1999;

Agfa, CSgA and Agfa-homologue finbrin subunits, respectively, (2)
CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombination of a recombination of a recombination of a recombination of the chromosome of the homologous species, replacing the native CC copy of that gene, and (4) eliciting an immune response in an animal, cC comprising separating an amino acid polymer comprising a recombinant Agfa CC protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CR acid sequence or sequences grown on a Salmonella, E. coli or CR polymer into the animal in conjunction with a carrier or diluent. (1) is CR useful for the expression of recombinant Agfa protein which is useful for CR coliciting an immune response in an animal. In a fimbrial presentation CR system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein sare usually strong creating the inserted epitope, and hybrid fimbriae are usually strong creating the inserted epitope, and hybrid fimbriae are easy and cinexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising are combinant of the production of strains of salmonella.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        invention describes a recombinant agfA gene the gene has been replaced by a segment of a

Also described are: (1) use of thin aggregative fimbriae (SERI7/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CagA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Salmonella enteritidis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Salmonella; agfA; chromosomal gene replacement; fimbrin; epitope; vaccine; immune response; immunogen; ds.

cc segment of the gene has been replaced by a segment of a foreign DNA CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) cc homologues species; (3) directing recombinant on of a recombinant open into the chromosome of the comprising separating an amino acid polymer comprising are mative protein containing a replacement segment or segments of foreign amino acid polymer comprising are manimo acid polymer comprising are manimo acid polymer comprising are manimo acid polymer comprising are manimo acid polymer comprising are protein containing a replacement segment or segments of foreign amino CC enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is cystem the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers (up to vaccine, the carrier fimbrial subunit proteins are usually strong consequence to putify in large amount. The present seguence is given in expensive to purify in large amount. The present seguence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention describes a recombinant agfA gene (I) where a CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbriae (SERI/TAR) nucleation described (C) assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA. AggA. homologue finbrin subunits, respectively; (2) firetonacteriaceae for the production of fimbriae comprising recombinant control back into the chromosome of the homologue species; (3) directing recombinant gene into the chromosome of the comprising separating an amino acid polymer comprising a recombinant experient or sequence or sequences grown on a Salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (I) is colymer into the expression of recombinant agfA protein containing an immlal in conjunction with a carrier or diluent. (I) is colymer into the animal in conjunction with a carrier or diluent. (I) is colymer into the heterologue antigens are presented in high numbers (up to system the heterologue antigens are presented in high numbers (up to compain the heterologue antigens are presented in high numbers (up to immunogenicity and adhesion properties relevant for an efficient live cagainst the inserted epitope, and hybrid fimbrine are usually strong conspensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

           The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEP17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) directing recombination of a recombination of the chromosome of the homologous species; (3) directing recombination of a recombination of a recombinant gene back into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombination of the native copy of that gene; and (4) eliciting an immune response in an animal,
                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Salmonella; agfA; chromosomal gene replacement; fimbrin; epitope; vaccine; immune response; immunogen; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein containing a replacement segment or segments of foreign amino caid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and cinexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant agfA gene (I) where a CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEP17/TAP) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA. CsgA and AgfA-homologue fimbriae (SEP17/TAP) nucleation depended CC AgfA. CsgA and AgfA-homologue fimbria subunits, respectively; (2) the chromologue species; (3) directing recombinant gene into the chromosome of the back into the chromosome of the homologues species, replacing the native comprising separating an amino acid polymer comprising a recombinant of a recombinant of a recombinant or protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or polymer into the expression of recombinant hafA protein which is useful for the expression of recombinant hafA protein which is useful for setul, then the homologues and introducing the cliciting an immune response in an animal. To a fimbrial presentation of setulation of setulation with a carrier or diluent. (I) is cliciting an immune response in an animal. In a fimbrial presentation of setulations are presented in high numbers (up to combine the heterologous antigens are presented in high numbers (up to combine the carrier fimbrial subunit protein sare usually strong companist the inserted epitope, and hybrid fimbriae are usually strong consequence in a present sequence in segment or sequence in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local

CC The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC (1) use of thin aggregative fimbriae (SEF17/TAP) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbria subunits, respectively; (2) firecting recombination of a recombinant gene into the chromosome of the back into the chromosome of the homologous species, (3) directing recombinant gene into the chromosome of the back into the chromosome of the homologus species, replacing the native comprising separating an amino acid polymer comprising a recombinant of a recombinant agene CC comprising separating an amino acid polymer comprising a recombinant of segment or segments of foreign amino CC Enterobacteriaceae host cell, from the host cell and introducing the CC acid sequence or sequences grown on a Salmonella, E. coli or CC polymer into the animal in conjunction with a carrier or diluent. (I) is CC eliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to 100,000 copies/cell), the hybrid fimbrin protein possesses both the CC immunogenicity and adhesion properties relevant for an efficient live immunogens, which may be important for directing an immune response

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

Page 137; 139pp; English.

CC The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) CC directing recombination of a recombination of a recombination of a recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC comprising a replacement segment or segments of foreign amino CC comprising a replacement segment or segments of foreign amino CC comprising an animal in conjunction with a carrier or diluent. (I) is CC useful for the expression of recombinant AgfA protein which is useful for the expression of recombinant AgfA protein which is useful for System the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens).

                                                                                                                                                                                                                                                                                                                                    CC Agfa, CsgA and Agfa-homologue fimbrin subunits, respectively; (2)
Cd directing recombination of a recombinant gene into the chromosome of the CC back into the chromosome of the CC back into the chromosome of the CC copy of that gene; and (4) eliciting recombination of a recombinant gene CC copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant Agfa acid sequence or sequences grown on a salmonella, E. coli or polymer into the animal in conjunction with a carrier or diluent. (I) is CC polymer into the expression of recombinant Agfa protein which is useful for the expression of recombinant Agfa protein which is useful for System the heterologous antigens are presented in high numbers (up to 1900,000 copies/cell), the hybrid fimbrin protein possesses both the CC vaccine, the carrier fimbrial subunit proteins are usually strong communacens. Which may be important for directing an immune response

The present sequence represents an isolated agfA gene fragment derived from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can nucleic acid sequence can be used to provide probes or primers which can selficially hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 361 BP; 94 A; 93 C; 94 G; 80 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-540-236-492/c

Sequence 492, Application US/09540236

Patent No. 6673910

GENERAL INFORMATION:

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATAR!

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-540-236-492

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                  Score
